

QGIS Application - Bug report #8302
missing join for label makes QGIS crash

2013-07-15 08:04 AM - Denis Rouzaud

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Vectors	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 17097
Description Make a join on a layer Use a joined field as a label. Remove joined layer. Save - reopen => crash		

History

#1 - 2013-07-15 08:46 AM - Giovanni Manghi
- Crashes QGIS or corrupts data changed from No to Yes

#2 - 2013-07-16 04:28 AM - Jürgen Fischer
- Status changed from Open to Feedback

Using a simple point shape and a csv file it's not reproducible here.

#3 - 2013-07-16 04:48 AM - Denis Rouzaud

sorry, correction:

Make a join on a layer
Use a joined field as a label.
Remove **the join**.
Save - reopen
=> crash

I got this with postgres, I did not test with other sources.

um, sorry, still not reproducible.

I'm also not able to replicate, used a postgis layer joined with a csv table.

Sorry, apparently it is related to a common crash when opening a project while another one is already open.

I made a video demo at first showing the crash: with the written procedure:

http://www.youtube.com/watch?v=O5J_aGYlbyQ

But if I open a blank QGIS, I can open the project without any problem, but if I reopen it again, it crashes.

I have tested again with the same exact steps as in the video, and no crash again. Maybe it depends on the data, can you share a sample?

Hi Denis,

I can reproduce it just activating the QuicFinder plugin.

I think this issue is not related to QGIS.

Please could you try by deactivating the QuickFinder plugin ?

You are right.

Thanks a lot for this, I will try to fix the plugin.
