

QGIS Application - Bug report #839

Crash when moving a vertex

2007-11-27 01:49 AM - Gavin Macaulay -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Digitising	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 10898
Description		
The following steps cause qgis to crash: - Load a linestring layer (from [[PostgreSQL]] in my case) - Enable editing on the layer - Click on the 'move vertex' tool - Click on the map, well away from the linestring, hold down the left mouse button and move the mouse - Qgis will crash The backtrace starts with: <pre>#0 0xb711fab9 in [[QgsGeometryVertexIndex]]::back () from /home/gavin/local/lib/libqgis_core.so #3905 0x0817ca0c in [[QgsMapToolVertexEdit]]::canvasMoveEvent () #3906 0xb703fb72 in [[QgsMapCanvas]]::mouseMoveEvent () from /home/gavin/local/lib/libqgis_gui.so #3907 0xb78734e6 in QWidget::event (this=0x8469388, event=0xbfd7444) at kernel/qwidget.cpp:5703</pre> This is with svn r7668 with the dialog box warning about the snap tolerance disabled. I think that prior to being able to disable the dialog box, a click down and move without selecting a vertex was not possible. Gavin
