Affected QGIS version:	1.8.0		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	invalid
Crashes QGIS or corrupts data:			**Copied to github as #:**	17176

Description

All,

I get this error when updating in Ubuntu:

W: GPG error: http://qgis.org precise Release: The following signatures couldn't be verified because the public key is not available: NO_PUBKEY EBB1B7ED997D3880

I followed the instructions here:

https://issues.qgis.org/projects/quantum-gis/wiki/Download#26-Ubuntu

The installation seems to work fine, however...

did you added the key?

gpg --keyserver keyserver.ubuntu.com --recv 997D3880

gpg --export --armor 997D3880 | sudo apt-key add -

#2 - 2013-08-05 08:41 AM - Matthew Baker

My mistake - that was the issue.

I just wasn't clear as to the necessity of adding that public key...the instructions are somewhat ambiguous (to the linux noob!!!)

Thank you for your help and reply!
