Category:	GUI			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:		**Copied to github as #:**	17192	

Description

QGIS weekly a13cdf8 - windows 7 x64

See the attached screenshots. When I resize QGIS, or change the window layer (i.e., open the log messages) it mangles the interface which stops rendering.

This only seems to happen when there is a reasonably large dataset loaded. I.e. a 20MB shapefile (image 4), or a several hundred MB SpatiaLite database.

History

#1 - 2013-08-08 11:25 AM - Giovanni Manghi

- Operating System set to Windows

- File resize.mp4 added

- File toolbars.mp4 added

- Category set to GUI

- Priority changed from Normal to Low

I have seen it too but just on Windows and in a less severe way (see attached screencast), maybe this a video drivers issue after all.

#2 - 2013-08-09 04:19 AM - Jonathan Moules

The graphics card is two "NVIDIA NVS 310".
Driver: NVIDIA Version 311.35

I've not seen this with any other application on this machine.

#3 - 2013-08-09 04:20 AM - Nathan Woodrow

This seems to be a Qt thing on some Windows machines. I get it here too.

#4 - 2013-09-26 08:53 AM - Jonathan Moules

- File Clipboard01.jpg added

Possibly the same issue, but in 2.0.1, **every** time I make the processing toolbox less wide, the window fails to update properly and I get a grey bar in the

map window where the processing box was before.

#5 - 2016-10-10 05:05 PM - Nyall Dawson

- Status changed from Open to Feedback

Is this still an issue with current supported releases?

#6 - 2017-01-02 06:11 AM - Giovanni Manghi

- Resolution set to not reproducable

- Status changed from Feedback to Closed

Closing for lack of feedback, please reopen if necessary.
