

QGIS Application - Bug report #8443

CRS for new layers

2013-08-11 12:49 PM - Lene Fischer

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows and MAC	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 17212
Description		
Master ver 31		
In Settings>Options>CRS I've set up a Use default CRS displayed below, and choosen EPSG:25832 - ETRS89 / UTM zone 32N		
But when I create a new layer by using Layer>New >New shapefile layer, CRS for the new layer is set to EPSG:4326 - WGS 84		

History

This should be an easy fix. Confirmed on Mac (again) and happens with new Spatialite layers as well (same dialog, it seems).

This is not a regression, since 1.8 also does not honor the selected CRS when creating new vector layers, as indicated in main Options.

I can't reproduce the bug on the latest master, is it still an issue?

#3 - 2013-09-14 08:25 AM - Lene Fischer

- Status changed from Open to Closed

It works now!
