

QGIS Application - Bug report #8569

Renaming a layer with features count

2013-09-04 12:14 AM - Rémi Bovard

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Legend	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 17315
Description		
When renaming a layer with features count turned on, the number is part of the layer name.

- Status changed from Open to Feedback
- Category set to Map Legend

This seems to be the intended behaviour, beside the layer name there is the **total** number of features, beside the symbology classes there is the number of the feature in each class.

#2 - 2013-09-04 02:39 AM - Rémi Bovard

Yes I understand the meaning of the number displayed.

What I was pointing it's that when renaming the layer, this number is considered as part of name (and not a metadata of the layer)

- File *rename.png* added

One of issue that depends of this is that if you rename a layer with features count on, the number is duplicated because it's considered as part of layer name.

See attached screenshot.

To avoid this behaviour, you need to delete the number when renaming the layer.

- Status changed from Feedback to Open

+1

Looks like dynamic data gets mixed up with static data. Should not be too hard to fix, but I wonder about Martin's plans concerning the legend refactoring

and if it will be easiest to take care of at the same time.
