QGIS Application - Feature request #8594
executeQuery on data provider

Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	17336

Description

It would be handy to be able to do executeQuery which would just pass the query to the provider and return a iterator of features.

Would allow for something like this:

```
provider = layer.dataProvider()
features = provider.executeQuery("Select * FROM blah WHERE A = 100")
for f in features:
   ...
```

This would be handy to allow to more advanced queries against a provider and letting QGIS handle all the QgsFeature creation.
