

QGIS Application - Feature request #861

GRASS Clean Modules don't work

2007-12-10 08:36 AM - horst-duester -

Status:	Closed	Resolution: fixed Copied to github as #: 10920
Priority:	Low	
Assignee:	leo-lami -	
Category:	GRASS	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
The new GRASS v.clean.* modules don't work. The reason is a wrong option definition. I have fixed the module *.qgm files. Now they work for me. The new files are attached at this ticket. Please test them for patch.

- Resolution set to fixed
- Status changed from Open to Closed

Thank you for bug fixing, the moduels worked also before, checking the box, but now the users can't make mistakes.

I put the new modules on the new svn.

Regards

leonardo

mmm... the prior modules didn't work for me neither with nor without checking the box. The -tool option is not a flag. GRASS tries to separate the word tool into 4 flag options. But how would it be possible to create check boxes to select or combine several tools into one clean process. Today you have to start clean more than one time when you need to combine tools.
