

## QGIS Application - Bug report #8659

### raster image with rotated worldfiles

2013-09-24 10:13 AM - malcom jamal

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Rasters	
<b>Affected QGIS version:</b>	2.0.1	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 17389
<b>Description</b>  great work on qgis but cannot insert raster image with rotated worldfiles on WGS 84 - UTM Zone 32Nord EPSG 32632  worldfile example 0.016719 201.172482 0.000000 -0.016719 677613.094651 5142519.979935  thanks		

#### History

##### #1 - 2013-09-24 12:53 PM - Giovanni Manghi

- Category set to Rasters
- Target version set to Future Release - High Priority
- Operating System deleted (windows + linux)

see also #3794

##### #2 - 2013-09-30 11:28 PM - Antal Kosza

There is something wrong with this raster dataset:

```
gdalwarp -r cubic -s_srs EPSG:32632 -t_srs EPSG:32632 ped208_cr.jpg ped208_cr.tif
```

Creating output file that is -2147483648P x 4898L.

ERROR 1: Attempt to create -2147483648x4898 dataset is illegal,sizes must be larger than zero.

##### #3 - 2013-10-01 12:57 AM - Giovanni Manghi

- Status changed from Open to Feedback

##### #4 - 2013-10-01 10:25 AM - Jukka Rahkonen

Where did you get that rotated world file? For me it looks bad.

I tried to understand how rotated world files are created and how they should be interpreted just yesterday. Have a look at this mail on OpenJUMP-dev <http://article.gmane.org/gmane.comp.gis.jump.devel/14544>

There is a small OpenOffice spreadsheet as an annex. You can play with the input parameters and look how the world file changes. Please report if you find that my logic was not correct.

hello,

I am very sorry, I have used this vlx under Autocad

<http://www.cadstudio.cz/georefimg>

to generate worldfiles

Old version jgw with

[GEOrefIMG command loaded. (C)2010, XANADU]

0.016719

201.172482

0

-0.016719

677613.094651

5142519.979935

New version jgw with

[GEOrefIMG command loaded. (C)2013, CAD Studio - [www.cadstudio.cz](http://www.cadstudio.cz)]

-0.01559042361

-0.00603851412

-0.00603851412

0.01559042361

677613.0754770313

5142519.993070455

with the new version jgw working very fine into Qgis.

Sorry again

malcom jamal

PS

with ped208.jpg have a problem with re-size/re-sampling/rotating problem

with the same file converted before into PNG, and imported, no problem. Importing with Master version under Linux ped208.jpg have no problem.
