

QGIS Application - Bug report #8727

GetProjectSettings returns field name instead of alias for display field

2013-09-30 08:01 AM - Bernhard Ströbl

Status:	Closed	
Priority:	Normal	
Assignee:	Marco Hugentobler	
Category:	QGIS Server	
Affected QGIS version:	2.0.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 17443
Description this would not be a problem but GetFeatureInfo returns the display field, thus QWC cannot display any hover information except from GetProjectSettings: <Layer displayField="adresse" queryable="1" visible="1"> <Name>Adressen</Name> ... </Layer> a GetFeatureInfo response on this layer shows: <GetFeatureInfoResponse> <Layer name="Adressen"> <Feature id="8052"> <Attribute value="Vor dem Neutor 7" name="Anschrift"/> ... </Layer> </GetFeatureInfoResponse> <i>Anschrift</i> has been defined as alias for the field <i>adresse</i> so GetFeatureInfo works as it should.
