| Crashes QGIS or corrupts data: | No | Copied to github as #: 17463 |
| Description <p>I upgraded to the new release and found I can longer open ESRI personal (not file) geodatabases when I choose to Add Vectors. The choice is no longer available from the file browser's File Types list. This function worked in my earlier installation - 1.8 Lisboa. I am running QGIS 2.0 on Mac OSX 10.8 Mtn Lion on a MacBook Pro (Retina).</p> <p>Has this functionality been moved somewhere else, or is there something new I must install in order for this to work? I installed GDAL complete and NUMPY, also SCIPY, from KyngChaos.com downloads. Perhaps personal geodatabase import is simply not included in this release? If so, any ideas when it will be supported?</p> <p>I have inherited many (many) Gb of critical data stored in ESRI personal geodatabases. I have a project colleague who requires access to all the data in this dataset. If the MDB access is no longer included, I need to know so I can make alternate arrangements to get the data into a format he can deal with.</p> <p>Many thanks, Russell in Canada</p> | | |
