

QGIS Application - Bug report #8773

Adding WMS layer crashes QGIS

2013-10-04 03:27 PM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Radim Blazek	
Category:	Web Services clients/WMS	
Affected QGIS version:	2.0.1	Regression?: No
Operating System:	Ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 17479
Description		
A few days ago it was pointed that adding WMS layers to QGIS was crashing it and I wasn't able to confirm it at that time. Today I found that adding a WMS layer (source is a sample shapefile) from a Mapserver server is causing qgis to crash. It is instant crash on Windows, while on Linux it can take a few zoom in/out to crash or freeze. To replicate: - use this server http://mapserver.uevora.pt/cgi-bin/mapserv?map=/home/mapserver/mapfiles/tests/ubc_ortofotomapas_portugal.map - add the "enquadramento_1995" layer as PNG with EPSG 3763 in a empty project. - play around -> crash Messages in the terminal are <pre>qgis.bin: malloc.c:3801: _int_malloc: Assertion `(unsigned long)(size) >= (unsigned long)(nb)' failed. Aborted (core dumped)</pre> <pre>*** glibc detected *** /usr/bin/qgis.bin: malloc(): memory corruption: 0x0000000007401590 *** Killed</pre> <pre>@*** glibc detected * /usr/bin/qgis.bin: double free or corruption (!prev): 0x0000000006c86120 *===== Backtrace: ===== /lib/x86_64-linux-gnu/libc.so.6(+0x7eb96)[0x7faff5f7db96] /usr/lib/x86_64-linux-gnu/libQtGui.so.4(_ZN10QImageDataD1Ev+0xc5)[0x7faff7fe33f5] /usr/lib/x86_64-linux-gnu/libQtGui.so.4(_ZN6QImageaSERKS_+0x48)[0x7faff7fe6578] /usr/lib/libqgis_core.so.2.0.1(_ZN14QgsRasterBlock7convertEN4QGis8DataTypeE+0x111)[0x7faff9cab6d1] /usr/lib/libqgis_core.so.2.0.1(_ZN30QgsSingleBandColorDataRenderer5blockEiRK12QgsRectangleii+0x185)[0x7faff9ce4c15] /usr/lib/libqgis_core.so.2.0.1(_ZN27QgsBrightnessContrastFilter5blockEiRK12QgsRectangleii+0x60)[0x7faff9ce7cd0] /usr/lib/libqgis_core.so.2.0.1(_ZN22QgsHueSaturationFilter5blockEiRK12QgsRectangleii+0x64)[0x7faff9ce8ab4] /usr/lib/libqgis_core.so.2.0.1(_ZN23QgsRasterResampleFilter5blockEiRK12QgsRectangleii+0x32f)[0x7faff9cda63f] /usr/lib/libqgis_core.so.2.0.1(_ZN18QgsRasterProjector5blockEiRK12QgsRectangleii+0x55)[0x7faff9cb6dd5] /usr/lib/libqgis_core.so.2.0.1(_ZN17QgsRasterIterator18readNextRasterPartEiRiS0_PP14QgsRasterBlockS0_S0_+0x199)[0x7faff9cb39] /usr/lib/libqgis_core.so.2.0.1(_ZN15QgsRasterDrawer4drawEP8QPainterP17QgsRasterViewPortPK13QgsMapToPixel+0x9d)[0x7faff9d1b2d] /usr/lib/libqgis_core.so.2.0.1(_ZN14QgsRasterLayer4drawEP8QPainterP17QgsRasterViewPortPK13QgsMapToPixel+0x95)[0x7faff9cf715] /usr/lib/libqgis_core.so.2.0.1(_ZN14QgsRasterLayer4drawER16QgsRenderContext+0x404)[0x7faff9cc6154]</pre>

fix set image no data, fixes #8773

History

#1 - 2013-10-04 04:08 PM - Giovanni Manghi

ps

no crash on 1.8

#2 - 2013-10-05 03:02 AM - Radim Blazek

I cannot reproduce (master/Debian 7) but I have suspicion where it could come from:

```
// qgsrasterblock.h:365

QImage *mImage;

// qgsrasterblock.cpp:674

QImage image = mImage->convertToFormat( format );
*mImage = image;
```

unfortunately I don't any see obvious bug. New mImage is allocated in QgsRasterDataProvider::block, in WMS case with type Qgs::ARGB32 (i.e. QImage::Format_ARGB32).

QImage image = mImage->convertToFormat(format) returns converted QImage (Qgs::ARGB32_Premultiplied) and assigns it to 'image' as value.

Assignment *mImage = image should dereferences original data of mImage, set data from image and increase number of data references.

I cannot find where image data are double freed or corrupted. Ideas from C++/Qt experts are welcome.

Of the CRSs that the server make available this happens just with EPSG 3763, maybe is a projection support issue?

I see that also reprojecting the wms causes crash, but if I'm not wrong you should have already fixed it in master, right?

Different projection should not make any difference, if not reprojected in QGIS.

I fixed only identify WMS with reprojection #8724.

Different projection should not make any difference, if not reprojected in QGIS.

it is making in this case. I can replicate this on both Windows and Linux.

I fixed only identify WMS with reprojection #8724.

ok,
so this #5896 is fixed, right?

#6 - 2013-10-06 08:45 AM - Giovanni Manghi

Different projection should not make any difference, if not reprojected in QGIS.

it is making in this case. I can replicate this on both Windows and Linux.

also on master

I am able to reproduce the crash when WMS is reprojected. I have got different backtraces but one is similar to your. Good, I can debug.

#8 - 2013-10-12 07:24 AM - Pekka Sarkola

- File QGIS_NoCrash_WMS_invidual_Layers.qgs added
- File QGIS_Crash_WMS.qgs added
- File QGIS_Crash_WMS_v21.qgs added
- File QGIS_NoCrash_WMS_invidual_Layers_v21.qgs added

Hi!

I'm not sure if this is related, but I have problems with WMS layers on 2.0.1 (34139bc) and 2.1 Master (f4e0c83) on Windows. Both are crashing when I open QGIS project with "combined" WMS layer. No crash if I have add WMS layers as "separated".

No crashes on Linux (Ubuntu 12.04).

To reproduce: I add QGIS project files which crash both version and project which are not crashing.

P

#9 - 2013-10-17 02:16 AM - Radim Blazek

- Status changed from Open to Closed

Fixed in changeset commit:"2b8197f19ae12a9779b27436ae250ba09447b62c".

#10 - 2013-10-17 02:17 AM - Radim Blazek

It should be fixed, there was really one byte more in memcpy.

Please test.

#11 - 2013-10-28 05:48 AM - Pekka Sarkola

Tested.

At least my examples are working. Thank you.

P
