

## QGIS Application - Bug report #8889

### Slow "selection" of features

2013-10-17 06:42 AM - Jonathan Moules

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Vectors	
<b>Affected QGIS version:</b>	2.0.1	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> fixed/implemented
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 17568
<b>Description</b>  I have two layers in my project:  1) An oracle layer with 32 features. 2) A shapefile with 53345 features.  If I have the shapefile enabled and displayed (all features are on-screen), then any time I use the selection tool to select a oracle feature, QGIS takes a second or so to actually select it. I suspect QGIS is re-rendering the shapefile (it's fully styled); even when the features I've selected have absolutely no overlap with the shapefile (thus QGIS shouldn't need to).  If I disable the shapefile, or pan off screen from it, selection works fine and fast.
