Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 17604
Description		
<p>Hello,</p> <p>As i explain in the mail on the QGis users list, I would like to make use of relational values in the editing form. The table I use to populate the list is a spatial table.</p> <p>I would like to restrict the list of available values in the form to the objects within the current extent of my map.</p> <p>I found an example which is ok but I would like to make use of a variable instead of a fixed extend (GeomFromWKT()). The example I tried is here : http://www.3liz.com/blog/rldhont/index.php?post/2012/11/06/Spatial-operators-in-QGIS-expression</p> <p>Thanks a lot,</p> <p>Mathieu Bossaert</p>
