

QGIS Application - Feature request #9020

Add usesGeometry argument in QgsFunction decorator for use Expression in Python

2013-11-06 12:34 PM - Luiz Motta

Status:	Closed	Resolution: Copied to github as #: 17675
Priority:	Normal	
Assignee:		
Category:	Expressions	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>I would like fetch the geometry field inside the Expression's function.</p> <p>At the moment, i can use the Geometry field for label, but, not populate the attributes inside table.</p> <p>The method with name of function for QgsExpression (http://www.qgis.org/api/classQgsExpression_1_1Function.html), has the argument if is used the geometry field, but, the decorator for Python, use only 2 arguments, the number for argument and the name of group.</p> <p>It is nice if the decorator have the argument if use the Geometry field, then, i can use the expression for all uses type in QGIS, example, populate attributes in table.</p>
