

QGIS Application - Bug report #9063

QGIS Plugin Builder crash since the second time it start

2013-11-14 05:44 AM - alexis acosta

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Python plugins	
<b>Affected QGIS version:</b>	2.0.1	<b>Regression?:</b> No
<b>Operating System:</b>	Debian GNU/Linux	<b>Easy fix?:</b> No
<b>Pull Request or Patch applied:</b>	Yes	<b>Resolution:</b> up/downstream
<b>Crashes QGIS or corrupts data:</b>	Yes	<b>Copied to github as #:</b> 17710
<b>Description</b>		
<p>This is the error:</p> <p>Couldn't load plugin onetime due an error when calling its classFactory() method</p> <p>Traceback (most recent call last):</p> <p>File "/usr/lib/python2.7/dist-packages/qgis/utils.py", line 204, in startPlugin     plugins[packageName] = package.classFactory(iface)</p> <p>File "/home/devgis2/.qgis2/python/plugins/onetime/__init__.py", line 26, in classFactory     from onetime import onetime</p> <p>File "/usr/lib/python2.7/dist-packages/qgis/utils.py", line 453, in _import     mod = _builtin_import(name, globals, locals, fromlist, level)</p> <p>File "/home/devgis2/.qgis2/python/plugins/onetime/onetime.py", line 27, in     import resources_rc</p> <p>File "/usr/lib/python2.7/dist-packages/qgis/utils.py", line 453, in _import     mod = _builtin_import(name, globals, locals, fromlist, level)</p> <p>ImportError: No module named resources_rc</p> <p>Python version:</p> <p>2.7.3 (default, Jan 2 2013, 14:09:21)</p> <p>[GCC 4.7.2]</p> <p>QGIS version:</p> <p>2.0.1-Dufour Dufour, exported</p> <p>Python path: ['/usr/share/qgis/python', '/home/devgis2/.qgis2/python', '/home/devgis2/.qgis2/python/plugins', '/usr/share/qgis/python/plugins', '/usr/lib/python2.7', '/usr/lib/python2.7/plat-linux2', '/usr/lib/python2.7/lib-tk', '/usr/lib/python2.7/lib-old', '/usr/lib/python2.7/lib-dynload', '/usr/local/lib/python2.7/dist-packages', '/usr/lib/python2.7/dist-packages', '/usr/lib/python2.7/dist-packages/gtk-2.0', '/usr/lib/pymodules/python2.7']</p> <p>Then looked the template with the 'import resources_rc' from (ImportError: No module named resources_rc) found /templateclass/TemplateClass.tmpl, and commented that. Please someone can verify.</p> <p>Regards</p> <p>Alex</p>

- Resolution changed from fixed/implemented to up/downstream
- Status changed from Open to Closed

this looks like it is not crashing the QGIS Plugin Builder

but it is crashing a plugin (onetime) that is created with it.

I tried it myself here, and if I (as per instructions) copy it to .qgis/python/plugins and run there I have problems like you mention above.

BUT if I copy the directory (generated by the builder) to another directory and run 'make deploy' the plugin runs fine.

So I would not consider this a QGIS issue, but of the plugin builder. See;

<http://plugins.qgis.org/plugins/pluginbuilder/>

Plz create an issue here:

<https://issues.qgis.org/projects/plugin-builder/issues>

for it.
