

QGIS Application - Feature request #9074

be able to select Measure Tool unit for measurements when GCS

<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>When I select the measure tool, specially in GCS the default option is degrees and it tells me (OTF off). What I would like to do is select from the menu itself what units I want the measurements done (m, ft, nm, sm, etc) without selecting a PCS. This is achievable using the Vincenty Formula implementation as other COTS software gives you the option (geodesic, planimetric, etc)</p> <p>In a PCS I would think this would be useful if I want to measure ft, m, sm, nm, etc since it would be just a simple conversion from one unit to another</p>

Tried in latest version, I think this was added at some point before but it works for the measuring tool so this should be closed
