- Category changed from Browser to Labelling
- Status changed from Open to Feedback
- Target version set to Future Release - High Priority
- Affected QGIS version changed from 2.0.1 to master

Hi,

it gives the same issue on qgis 2.0.1?

Can you attach sample data? I'm not able to replicate it on master/Linux.

Cheers!

Just tested qgis master 64bit installed with osgeo4w. No issues here. Maybe a plugin is the cause? can you please try with a clean installation? thanks.

Hi Giovanni,
I'm using a total brand 'new' installation from weekly. And my students the same.

using the standalone installer or osgeo4w?

All [weeklies](#) are standalone installer snapshots from osgeo4w.

yes I know, I was trying to understand what can be the difference from their installation and mine. I can't replicate the issue.

#8 - 2013-12-03 09:40 AM - Larry Shaffer

I can not reproduce crash with 2.0.1 release on Mac.

Lene, do you have a custom Python expression function that is being loaded?

Hi

Now we have all updated to the 2. december version - and now it works.

We also encountered that we were unable to calculate in the fieldcalculator. So decided to take a newer version.

At first my students mumbled at bit- but seeing that a program can be fixed to fast - they were impressed.

Living (giving lectures) on the edge is no problem in an organisation like this. Thanks!!!
