Category:	PyQGIS Console		
Affected QGIS version:	2.0.1	**Regression?:**	No
Operating System:	Ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	17795

Description

When I write something into the python editor, QGIS crashes. When running from the command line, i get this warning:

    Warning: void DBusMenuExporterPrivate::addAction(QAction*, int): Already tracking action "Werkzeugkiste" under id 311
    ERROR 1: Problem reading /home/valentino/.qgis2//gdal_pam/gdal_pam_proxy.dat header - short or corrupt?
    QGIS died on signal 11Could not attach to process. If your uid matches the uid of the target
    process, check the setting of /proc/sys/kernel/yama/ptrace_scope, or try
    again as the root user. For more details, see /etc/sysctl.d/10-ptrace.conf
    ptrace: Die Operation ist nicht erlaubt.
    No thread selected
    No stack.
    gdb returned 0
    Abgebrochen (Speicherabzug geschrieben)

This also happens when I deactivate all my additionally activated plugins.

- Status changed from Open to Feedback

I think this is not related to the console code, please could you try the latest master code ?

Also could you provide more info about the crashes ?
