

QGIS Application - Bug report #9217

(Windows) uninstall doesn't remove registry entries

2013-12-16 06:13 AM - Jonathan Moules

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Windows Package	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 17840
Description		
Uninstalling QGIS (either stable release or the weekly) from Windows doesn't remove the registry entries. Ideally QGIS would determine if there are other versions installed, and if not, would clean up the registry as part of the uninstall.

I second this. And the same applies to the application directory as well.

The situation roots in the fact that both the registry key and the program directory/start menu group uses the version code name, such as "QGIS Pisa". This makes it behave like it was a different product. The update leaves junk under "QGIS Wien", etc.
