QGIS Application - Bug report #9220
Error in Export as PDF when transparency has been selected and then removed

2013-12-17 05:33 AM - Phil Jones

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Map Composer/Printing		
Affected QGIS version:	2.0.1	**Regression?:**	No
Operating System:	Mac OS X	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	worksforme
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	17841

Description

I've encountered an error in Export as PDF from the print composer. When I've added a transparency amount to one layer and then removed it again, the Export to PDF still produces a raster image.

I perform these steps to export a png with transparency, then revert to no transparency to produce vector images. To work around the issue I've had to delete my QGIS project file and effectively start again.

To reproduce the error:
- add vector layer(s)
- I've also been using point layers added as a csv file with x and y co-ordinates.
- Perform Voronoi analysis.
- Add transparency to the Voronoi polygon layer.
- Remove all transparency from the Voronoi layer.
- Export using print composer. The resulting pdf is raster even though the transparency has been removed.

I've searched to see if I can find a similar issue but haven't found anything so I've opened a new issue.

- Status changed from Open to Feedback

Did you untick the "Print as raster" option under the Composition properties panel?

#2 - 2014-06-23 04:50 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Feedback to Closed

closing for lack of feedback.
