Affected QGIS version:			**Regression?:**	No
Operating System:	Debian		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	10982

Description

When I start QGIS with English interface, the "Raster Layer Properties > Symbology > Render As=Single Band Gray > Grayscale Band Selection" let's me choose between "Red/Green/Blue/Not Set". Ok.

But in Polish interface (my native language), the same sequence let's me choose from "Brak/Green/Blue/Not Set". Pay attention to "Brak" instead of "Red"; "Brak" in Polish means "Not Set" or "missing". And selecting it results in a colortable as if "Not Set" was chosen indeed.

Summary: there is no way to select "Red", but there are 2 ways of choosing "Not Set" in Polish interface.

SVN r8095, built and running against QT 4.3.3.
