

QGIS Application - Bug report #9253

Regarding issue #8793... is not solved (OSM maps)

2013-12-26 02:23 AM - Soren Lindqvist

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Browser	
Affected QGIS version:	2.0.1	Regression?: No
Operating System:	Mac OSX	Easy fix?: No
Pull Request or Patch applied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 17869
Description Downloaded osm.bz2 for the countries of Portugal and Spain at "http://download.geofabrik.de/europe.html" Successfully imported Topology from XML Successfully exported Topology to SpatiaLite of polylines Failed to export Topology to SpatiaLite of polygons: Can start the dialog and the process, after a while QGIS crashes. When connecting to the db via Add SpatiaLite Layer, I choose the created layer, which is empty, attribute table has zero objects. Both downloaded files has the exact same problem polylines works great but polygon crashes QGIS		

History

#1 - 2013-12-26 02:30 AM - Giovanni Manghi

- Resolution set to invalid
- Status changed from Open to Closed

The issue #8793 has been fixed in qgis master, if you are using qgis 2.0.1 (from the details of this ticket) then you are not using a version that includes the fix.

Please reopen if necessary.

PS

Please use meaningful subjects/titles when filing tickets, eventually referring to other tickets in the description.

My apologies, you need to use the developer version for it to work!

Thanks for the update, as I downloaded the latest version (stable) I thought it was included.
