

QGIS Application - Feature request #9363

Buffer tool should provide a way of using Units other than data source units

2014-01-17 12:42 AM - Devdatta Tengshe

Status:	Open	Resolution: Copied to github as #: 17963
Priority:	Low

Category:	Vectors	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Often I have data in Geographic Lat-long and want to buffer them to 1km or something similar.</p> <p>The current way to do this, is to export that layer to a new layer with the appropriate projection, and then buffer the expoted data. This is not convenient, and not at all user-friendly.</p> <p>I'll rather prefer that an option be available, where the user can select the distance and if it in different units/projection, then maybe the user can select the projection in which to buffer.</p> <p>This will be much more user friendly, than the current procedure.</p> <p>P.S. I searched and found only this bug(#8136), but it was closed as it was more of a question.</p>
