

QGIS Application - Bug report #9420

Bad WMS display (EPSG:2972)

Description		
<p>The French Guiana RGFG95/UTM22N projection (EPSG:2972) is bad defined. This seems to be corrected under the dev version.</p> <p>The problem concern the bad display of that RGFG95/UTM22N coordinates system when using the French Geoportail Webservice WMS in that system. It looks like if the projection was restricted to the UTM22 spindle, whereas it could not be troncated over the W 54° because that projection has been extended to the all French Guiana territory (it works well with another GIS). Notice that this WMS works well to if I choose the IGNF:UTM22RGFG95 coordinates system.</p>

If it works fine in the dev version of qgis, then this is considered fixed because there are no backports. Instead there will be a new qgis version in under 30 days.

Sorry but please have a look to my second sentence.

I've updated my dev version today and it doesn't work well anyway: no display over the W54° (UTM21) when I choose that WMS webservice in RGFG95/UTM22N coordinates system.
