Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	No	Copied to github as #: 18059
Description r.report module produces a window with a big r.report written. If we save to file, a file with only "r.report" is produced. The table of values is created in the log but is not accessible while the "reports" window is in front. Once we close it the all module windows close.

this is duplicate of #6379

to keep the (log) window open after a tool run there is an option in Processing general options ("keeps the window open...").
