Description

Exporting an image from map composer add its own extension .EPS to the file name. This behaviour is not present for other image types.

So for example, if I type the name map.eps or map.EPS it is saved as map.EPS.EPS .

Minor bug but annoying, the behaviour should be consistent across the image types.

How are you exporting to EPS? I don't have any choice of EPS export from composer...

#2 - 2014-02-05 09:20 PM - Bogdan Hlevca

I have. File->Export as image-> and select EPS
