<b>Description</b>		
<p>Running QGIS 2.0.1-Dufour desktop on windows XP 32bit</p> <p>I'm connected to a WFS server (some topographical data in GML 2.1.2) and want to set a bounding box</p> <p>I choose "Build query" from the "Add WFS Layer from a Server"-window and write:</p> <pre>bbox( \$geometry , geomFromGML( '&lt;gml:LineString srsName="EPSG:25832"&gt;&lt;gml:coordinates&gt;709841,6187968 727061,6198617&lt;/gml:coordinates&gt;&lt;/gml:LineString&gt;' ) )</pre> <p>When i type in that last parentheses ')' i get crash dumped.</p> <p>If I instead load all the data from the WFS and then afterwards do a selection query with the bbox same as before, I get the features selected I expected - no crash</p> <p>Unsure if it's related to #8584</p>

Fix #9501 (expression crash when \$geometry is used without a feature)

#### History

**#1 - 2014-02-06 05:17 AM - Thomas Sogaard-Pedersen**

intersects( \$geometry, geomFromWKT( 'LINESTRING(709841 6187968,727061 6198617)' ) ) causes a crash aswell

I confirm QGIS crash with both queries. This ticket should have "**Causes crash or corruption**" set to "Yes", shouldn't it?

**#3 - 2014-02-07 12:18 AM - Thomas Sogaard-Pedersen**

Indeed it should have been set to "Yes".

I overlooked the option when I made the issue - And now I seem to be unable to edit it

If a mod here, sees this, would you kindly set the "Causes crash or corruption:" to "Yes" on my behalf?

**#4 - 2014-02-07 02:09 AM - Jukka Rahkonen**

Just adding filter item & geometry from the builder menu made crash for me.
