Easy fix?:	No	Resolution: Copied to github as #: 18117
Description I'm using QGIS on a windows based tablet with a touch sensitive screen for field surveying work. My work situation would be immensely improved if it was possible have icons with sizes larger than 32 (pixel/points ?). AFAIK, QGIS icons is SVG based so it should be fairly easy to add icons size choices like 48, 64 and 72. By setting icons to a really large size (>> 32) and removing unnecessary menus and icons , it would be possible to have a really nice tablet-based experience with QGIS without resorting to programming a whole new user-interface. Fixed in changeset commit:"b1ce532dfd890cfb548066a317c41bf16b0245a3".

#2 - 2014-08-27 11:47 AM - Matthias Kuhn

For removing unnecessary menus and icons, please resort to customization (It would be nice if you could share if you have something of public interest)

#3 - 2014-08-27 12:53 PM - Bo Victor Thomsen

Thank You Matthias - And I will share the result, when I - using customization - have made a decent user interface fitting for tablets

Regards

Bo Victor
