

## QGIS Application - Feature request #9535

### Set standard value in value map

2014-02-11 01:28 AM - Victor Axbom

<b>Status:</b>	Closed

<b>Easy fix?:</b>	No	<b>Copied to github as #:</b> 18123
<b>Description</b>  It would be great if you could be able to set a standard value in the value map edit widget. This standard value should then automatically be selected in the dropbox when you create a new object. As it is now the values are just sorted alphabetical in the dropbox and the first value is chosen.		

#### History

##### #1 - 2014-02-11 02:19 AM - Jürgen Fischer

Note: Such default values would conflict with the default values the data provider can deliver (eg. in postgres).

##### #2 - 2014-02-11 04:30 AM - Matthias Kuhn

This should be defined on the field and not on a widget IMO.

It is about the same level of abstraction as the domains/constraints discussed in Brighton.

I don't think this necessarily conflicts with default values by providers. This feature would need to be enabled explicitly and if disabled provider defaults should be used.

##### #3 - 2017-05-01 12:47 AM - Giovanni Manghi

- *Easy fix? set to No*

##### #4 - 2018-01-29 04:42 AM - Nyall Dawson

- *Resolution set to fixed/implemented*

- *Status changed from Open to Closed*

I think this can be closed. The widget can now default to NULL values, or alternatively users can set default values for fields in a multitude of different ways. Together these address the intended use case described here.
