Category:	Build/Install		
Affected QGIS version:	2.0.1	**Regression?:**	No
Operating System:	windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	18129

Description

Just updated to qgis 2 with osgeo4w. Installer seemed to go fine, but no shortcuts were placed on the desktop or in start menu.

Runs fine from the .bat files in the osgeo4w\\bin

History

Should this be at OSGeo4W trac for issues? Not sure if this is a QGIS issue.

http://trac.osgeo.org/osgeo4w/report/1

#2 - 2014-02-13 11:12 AM - Donovan Cameron

- Target version deleted (Version 2.0.0)

- Status changed from Open to Closed

Please let the OSGeo4W package maintainers know about this - they should be able to fix it.
