

QGIS Application - Bug report #9551

Impossible to see selection or current identify feature if using data defined colours

2014-02-12 06:01 PM - Nyal Dawson

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Martin Dobias	
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 18138
Description		
<p>I'm marking this as a blocker as it's a regression from 2.0.</p> <p>If a layer uses data defined colours, it's currently impossible to see which feature is highlighted by either a selection or the identify tool. It looks like QGIS is just redrawing the selection/identify result using the data defined colour, rather than the selection/identify colour.</p>
