QGIS Application - Bug report #959
Windows Vista - Error saving project - missing datasource params at qgs file

2008-02-26 12:42 PM - luigibr -

Status:	Closed		
Priority:	Low		
Assignee:	nobody -		
Category:	Project Loading/Saving		
Affected QGIS version:		**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed
Crashes QGIS or corrupts data:		**Copied to github as #:**	11018

Description

I use qgis 0.91 for windows avaliable at www.qgis.org
I have a project with 4 postgis layer's. I do some thematic work and save the project.
When i was loading that project, a message appers saying that some layer's cannot be found.
So I open the project file (*.qgs) and the information about the schema was missing at node datasource (inside maplayer node).
To correct the file, i write the information and the project open without problems.
So i think the problem is when the QGIS write the information about db connection at project file (qgs file).

--------------------------*.qgs file save by qgis----------------------------------

```
.....
  <projectlayers layercount="4" >
     <maplayer minScale="1" maxScale="1e+08" scaleBasedVisibilityFlag="0" geometry="Point" type="vector" >
        <id>_public+_table_v2+_the_geom+_sql_20080226164351311</id>
        <datasource>dbname=db host=192.168.0.100 port=5432 user=postgres password='******'
table=*here-is-missing-the-squema*"table_v2" (the_geom) sql=</datasource>
        <layername>table_v2</layername>
        <srs>
.............
```

and

--------------------------*.qgs file edited----------------------------------

```
.....
  <projectlayers layercount="4" >
     <maplayer minScale="1" maxScale="1e+08" scaleBasedVisibilityFlag="0" geometry="Point" type="vector" >
        <id>_public+_table_v2+_the_geom+_sql_20080226164351311</id>
        <datasource>dbname=db host=192.168.0.100 port=5432 user=postgres password='******' table="public"."table_v2"
(the_geom) sql=</datasource>
        <layername>table_v2</layername>
        <srs>
...
```

----

i put "public". before "table_v2" at table description.

could you please test that bug with 0.11.0?

Thanks,

Marco

- Resolution set to fixed

- Status changed from Open to Closed

Hello Marco,

i have tested QGIS 0.11.0 with one postgis layer, one shp layer and one csv layer and all function without problem. I think the problem is solved.

Very thanks :D
