| Crashes QGIS or corrupts data: | | Copied to github as #: 18207 |
| Description | | |
| <p>I installed qgis 2.2 this morning from ubuntugis-unstable on ubuntugis-precise. I formerly had 2.1 installed from ubuntugis</p> <p>The install gave the following suspicious Output:</p> <p>qgis-providers-common (2.0.1-2+precise1) wird eingerichtet ... Synchronizing CRS database with GDAL/PROJ definitions. QFSFileEngine::open: No file name specified QFSFileEngine::open: No file name specified QFSFileEngine::open: No file name specified QFSFileEngine::open: No file name specified QFSFileEngine::open: No file name specified Loading epsg.wkt 0 WKTs loaded CRS update (inserted:0 updated:0 deleted:3631 errors:0) No CRS updates were necessary.</p> <p>And although qgis 2.2 installed fine, all the commonly used projections (31466, 25832, WGS 84 even) were gone. The list wasn't empty. It's just a very strange collection of obscure projections.</p> <p>I tried apt-get install --reinstall qgis</p> <p>I tried purging qgis from the System and reinstalling.</p> <p>I Keep getting the same log and the same result.</p> <p>The horrific part is, now I don't have qgis 2.1, because it's not on ubuntugis-unstable anymore, and even worse, I just managed to remove qgis and go back to the qgis.org main, which is Dufour, And I still get the same log message as above, and my projections are still gone. Which means I have no ability to get a functional qgis back with apt-get. I'm scared. Help.</p> <p>I get the log message when I just install qgis-providers, so it's in there.</p> <p>Is there anyway I can reinstall the projections?</p> | | |

History

#1 - 2014-03-01 03:39 AM - Giovanni Manghi

- Affected QGIS version changed from 2.0.1 to 2.2.0
- Status changed from Open to Feedback
- Category set to Build/Install

have you tried update your sources and re-install?
