

QGIS Application - Bug report #9653

"Output layer" default for raster calculator

2014-02-25 08:13 AM - Jonathan Moules

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 18221
Description		
<p>Reproduce:</p> <ol style="list-style-type: none">1) Load Raster Calculator, enter whatever formula.2) Type desired filename (a.tif) into "Output layer".3) Set to GeoTiff (probably happens with all types).4) Press OK. <p>What will happen is that "a.tif" will be created in the QGIS/bin directory. Except that when I open the "output layer" dialog by clicking the elipses it shows me a different directory (one where I normally save my data). Surely it should place it into this directory; it makes no sense to ever put data into /bin</p>		

History

#1 - 2014-02-27 11:07 AM - Giovanni Manghi

- Target version set to Future Release - Lower Priority
- Category set to GUI

#2 - 2017-05-01 01:08 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

#3 - 2019-03-09 03:11 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
