

QGIS Application - Bug report #9664

Joined layers cause problems on GetFeatureInfo requests

2014-02-26 01:50 AM - Giovanni Allegri

Status:	Closed	
Priority:	High	
Assignee:		
Category:	QGIS Server	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 18231
Description <p>I was testing joined layers to perform GetFeatureInfo on joined fields. I've noticed that issuing requests to the main layer (joined to another one) make QGIS Server behave bad.</p> <p>I haven't been able to find a rule but I have observed:</p> <ul style="list-style-type: none">- Internal Server Error when FEATURE_COUNT is low (e.g. 1 to 10 elements)- XML response cut at some point (incomplete output) <p>This happens even if I filter on layers' own fields.</p> <p>After removing the join the request works as expected.</p>		

History

#1 - 2014-03-01 03:47 AM - Giovanni Manghi

- OS version deleted (2.2.0)
- Target version set to Version 2.4

#2 - 2014-03-01 08:27 AM - Jürgen Fischer

- Target version changed from Version 2.4 to Future Release - High Priority

#3 - 2016-09-02 12:38 AM - Tudor Băăescu

Does this still happen? There was a fixed issue (with joined layers in QGIS Server) about a year ago which was fixed.

Can you provide some test data and the request?

#4 - 2017-01-04 11:54 PM - Giovanni Manghi

- Resolution set to fixed/implemented
- Status changed from Open to Closed
