

QGIS Application - Bug report #9738

updatable view QGIS 2.2.0

2014-03-07 02:51 AM - Sylvia Preuss

Status:	Closed	
Priority:	High	
Assignee:	Jürgen Fischer	
Category:	Data Provider/PostGIS	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch applied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 18290
Description		
<p>I added the view qry_alles to my qgis-project. I chose edit mode and created a new object. I saved it into PostGIS database. Now I want to make changes on my object, but it's not possible to UPDATE or DELETE it, or change an attribute into the database. The view consists of two tables which should be updated by rules and functions.</p> <p>For testing you can use QGIS 1.7.4 or lower, everything is working as it's supposed to. So you can see how it should work. But with the new QGIS-versions 2.0.1 and 2.2.0 it's not working anymore.</p> <p>The attributes "objekt" and "merkmal1" are the same and "merkmal5" are used for joining the tables.</p> <p>PostgreSQL 8.1.4 on i686-pc-linux-gnu, compiled by GCC gcc (GCC) 4.1.0 (SUSE Linux) PostGIS 1.3 QGIS 2.2.0 on Windows7</p> <p>I added three test-datasets and all sql-statements you need for the example.</p>		

Associated revisions

Revision 7f6663a8 - 2014-06-01 12:54 AM - Jürgen Fischer

postgres: also accept PGRES_TUPLES_OK as positive result for UPDATE/DELETE/INSERT (fixes #9738)
