QGIS Application - Bug report #976
don't allow editing data the user has no write rights for

2008-03-06 10:23 AM - Maciej Sieczka -

Status:	Closed		
Priority:	Low		
Assignee:	Jürgen Fischer		
Category:	Digitising		
Affected QGIS version:		**Regression?:**	No
Operating System:	All	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed
Crashes QGIS or corrupts data:		**Copied to github as #:**	11035

Description

Example:

1. Add a [[PostGIS]] layer for which you have only read access granted.

2. Start editing it, save changes - you can't; QGIS should not allow you edit in the first place.

3. Open table editor, add a column or edit some rows, save - QGIS does not complain. Now verify if changes are really saved - no they aren't. QGIS should not allow you edit a table you have no write rights for.

Really confusing. Yield "No write access" error or disable editing capabilities if write access not possible for a given layer.

The bug seems related to #933.

Associated revisions

Revision 1ff7509b - 2008-03-12 10:02 PM - Jürgen Fischer

- applied patch from Steven Mizuno from #964. Nice work. Thank you very much.
  - better privilege handling (fixes #955)
  - better postgis i18n (unicode handling, identifier quotation)
  - password saving fixed
  - support for int8 type added
- let provider capabilities follow table privileges (fixes #976)
- use prepared statements for adding features (fixed #977)
- remove connection pooling (fixes cursor problem)
- clear attribute list on loadFields (fixes #984)
- ignore bytea fields
- handle transactions/error reporting better
- some cleanups
