

QGIS Application - Bug report #9770

Removal of nodes can create invalid linestrings

2014-03-12 09:27 AM - faustino alarcon

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Digitising	
Affected QGIS version:	2.2.0	Regression?: No
Operating System:	GNU/Linux	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 18312
Description In QGIS 2.2 after deleting node of a linestring with only 2 vertices on a postgis layer and saving that, the layer disappears. And now has lines with one vertex...? In that case following query returns rows: SELECT sum(ST_NPoints(the_geom)) as count_nodes,gid FROM way_err group by gid having sum(ST_NPoints(the_geom))=1 When those records are deleted the layer goes back to normal in QGIS. In QGIS 2.0 in the same layer does not allow the vertex removal. Regards Anibal
